

Complete User Guide

Written for a saree wholesaler or retailer — from installing on a brand-new computer, through barcoding your stock and scanning at the counter, to GST invoices, payments and reports.

Version 0.1.0 · Covers every screen and every button

What's in this guide

PART 1 — Getting started

1. What this software does for a saree business
2. Installing on a new computer
3. First run — creating your owner account
4. Your recovery code
5. Signing in every day

PART 2 — One-time setup

6. Your company profile
7. Choosing the saree (textile) bill format
8. Setting your shop defaults
9. Staff accounts and what each role can do

PART 3 — Building your stock list

10. Adding saree designs
11. Generating barcodes
12. Printing and sticking barcode labels
13. Adding customers and suppliers

PART 4 — Buying stock

14. Receiving goods (GRN)
15. Purchase orders
16. Checking your inventory

PART 5 — Selling — the counter

17. The POS screen

18. Scanning sarees with a barcode machine
19. Understanding PCS, CUT and MTS
20. Discount / scheme before GST
21. IGST vs CGST + SGST
22. Saving and printing the tax invoice
23. The printed bill explained

PART 6 — Other documents & money

24. Proforma, challan, order and credit note
25. Recording payments

PART 7 — Reports & administration

26. Dashboard
27. All seven reports
28. Activity log
29. Backups — protecting your data
30. Licence and machine transfer
31. Help & support

PART 8 — Reference

32. Barcode scanner setup & tips
33. The account menu & changing your password
34. Your daily / weekly / monthly routine
35. Updating and uninstalling
36. Troubleshooting
37. Glossary

How to read this

Every screen in this guide is a real screenshot of the working software, not a drawing. Follow it front to back the first time; afterwards use the contents above to jump to whatever you need.

1. What this software does for a saree business

Shailee-GRMS runs entirely on your own computer. There is no internet requirement, no monthly cloud fee, and your customer list and sales figures never leave your shop.

It is built around how saree trading actually works:

What you do today	How the software handles it
Every saree is a fixed cut, usually 6.30 metres	Each design stores its CUT ; metres are worked out for you
You price per piece, not per metre	RATE is per piece — Amount = PCS × RATE
You give a 2% scheme or discount off the bill	Applied before GST, exactly as on your printed bills
Selling Surat → Bihar means IGST	Chosen automatically from the two state codes
You count pieces by hand at the counter	Scan a barcode; the piece count adds itself
Bills are typed again in a separate book	One bill updates stock, ledger, GST and reports together

A normal day, in order

- 1 Stock arrives from the mill → record a **GRN** (Part 4)
- 2 Print barcode labels and stick one on each design's pile (Part 3)
- 3 Customer picks sarees → scan them at the **POS** (Part 5)
- 4 Press **Save & print bill** → GST invoice comes out (Part 5)
- 5 Money arrives → record the **receipt** against the bill (Part 6)
- 6 Month end → open **Reports** for GST and profit (Part 7)

2. Installing on a new computer

You need a Windows 10 or 11 computer. Nothing else — no SQL server, no Office, no internet connection.

- 1 Copy `Shailee-GRMS-Setup-0.1.0.exe` onto the computer (pen drive is fine).
- 2 Double-click it.
- 3 If Windows shows a blue **"Windows protected your PC"** box, click **More info** then **Run anyway**. This appears because the installer is not yet code-signed; it is not a virus warning.
- 4 Choose the install folder (the default is fine) and click **Install**.
- 5 Tick **Create desktop shortcut** so staff can find it.
- 6 Click **Finish**. The app opens by itself.

Where your data lives

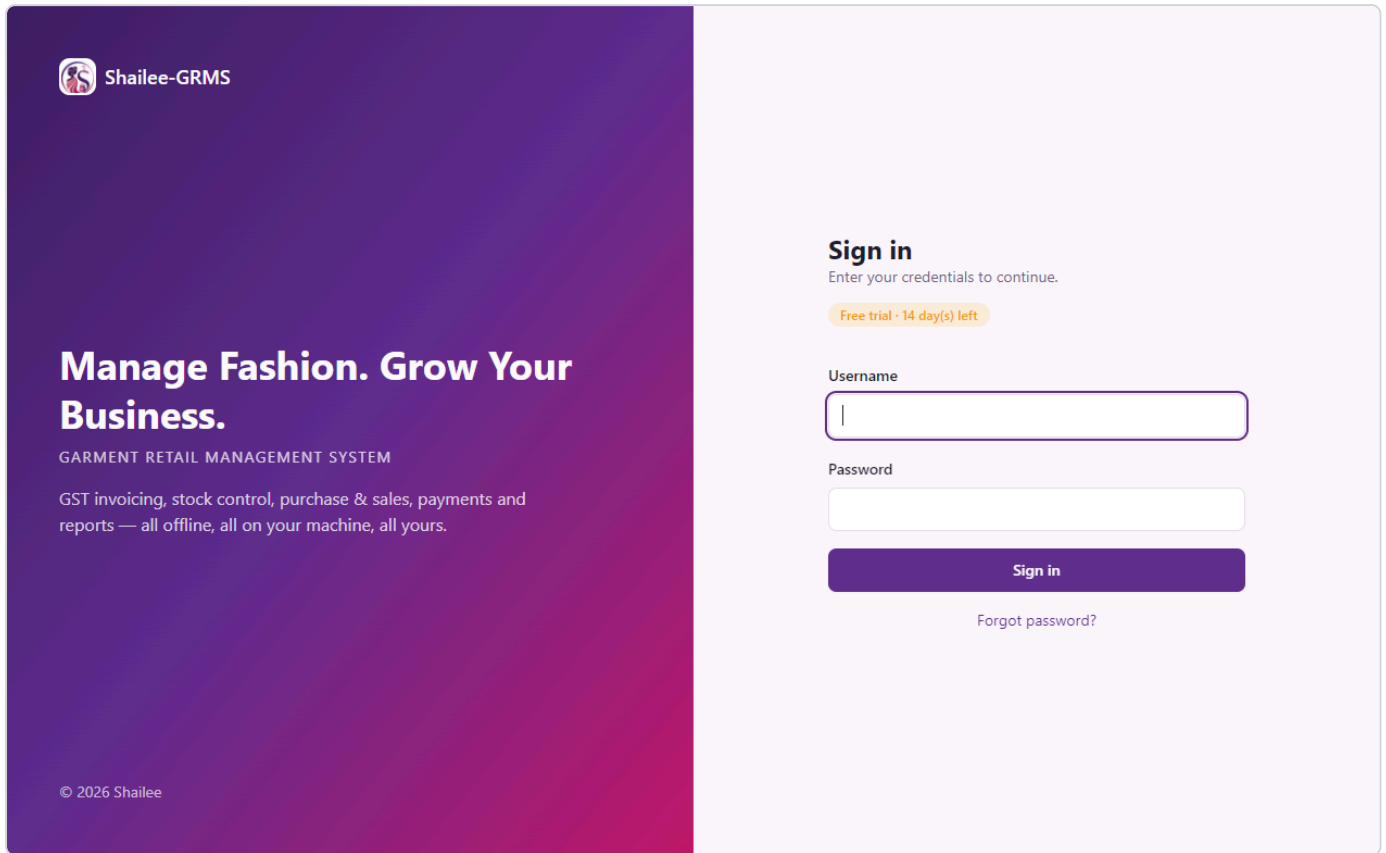

Everything is stored in one file on this computer at `C:\Users\<you>\AppData\Roaming\shailee-grms\ledgerline.db`. That single file is your whole business — Part 7 shows how to back it up.

One computer, one copy

Do not put the data file on a shared drive and open it from two computers. The licence is per-computer, and two copies writing at once will corrupt your records. To move to a new PC, use Backup → Restore (section 29).

3. First run — creating your owner account

The very first time the app opens it has no users at all. It asks you to create the owner account — the master login that controls everything.

The sign-in screen you will see from the second run onwards

- 1 **Full name** — your name, printed nowhere; it just labels your actions in the log.
- 2 **Username** — what you type to log in. Short and lowercase is easiest, e.g. `owner`.
- 3 **Email** — optional.
- 4 **Password** — at least 8 characters. Use something staff cannot guess.
- 5 **Confirm** — type it again.
- 6 Click **Create account & continue**.

Advanced setup

Ignore this unless Shailee gave you a setup code. Without a code the account is created as

Admin

— full control of your business — which is what you want.

4. Your recovery code

Immediately after the account is made, the app shows a **one-time recovery code** that looks like 9UH6-9BUN-NGT7-TPEX .

Write this down now — it is shown only once

If you forget your password, this code is the only way back into your own data. There is no "email me a reset" because there is no server. Keep it in your safe or with your CA, not in a file on the same computer.

Click **I've saved it — continue** to enter the app. You can generate a fresh code later from the account menu (top-right); doing so cancels the old one.

5. Signing in every day

From now on the app opens on the sign-in screen. Type your username and password and press **Enter**.

- **Forgot password?** — asks for your recovery code, then lets you set a new password.
- Five wrong recovery attempts lock the account, to stop guessing.
- Your trial days remaining are shown as an orange badge.

6. Your company profile

Go to **Settings** in the left sidebar. What you type here is printed on every invoice, so type it exactly as it should appear on a GST bill.

The screenshot shows the Shailee-GRMS interface. The left sidebar contains a menu with categories: MASTERS (Items, Clients & Vendors), OPERATIONS (Point of Sale, Inventory, Purchases, Sales, Payments), INSIGHTS (Reports), and ADMINISTRATION (Users, Activity Log, License, Settings, Help & Support). The 'Settings' option is highlighted. The main content area is titled 'Settings' with a subtitle 'Your company identity appears on every invoice and document.' and a 'Save' button. Below this is the 'Company profile' section. It includes a 'Company logo' upload area, and input fields for 'Legal name *' (KRISHNA GANGA CREATION), 'Trade name' (KRISHNA GANGA CREATION), 'GSTIN' (24ACNPB0084A1ZB), 'PAN' (ACNPB0084A), 'Address line 1' (SHOP-107, DADU TEXTILE MARKET), 'Address line 2' (RING ROAD, UMARWADA), 'City' (SURAT), and 'State' (Gujarat). A 'Trial - 14d left' banner is at the bottom left of the sidebar.

Settings → Company profile. This becomes the header of every bill.

Field	What to put
Legal name (required)	The name on your GST certificate, e.g. KRISHNA GANGA CREATION
Trade name	The name customers know, if different. This is what prints big at the top.
GSTIN	Your 15-character number. Checked as you save — a wrong format is refused.
PAN	10 characters. Prints in the top-right of the bill.
Address 1 / 2, City, State	Shop address as it should print
State code (GST)	Two digits — 24 for Gujarat, 27 Maharashtra, 10 Bihar. Get this right — it decides IGST vs CGST+SGST on every bill.
Phone	Prints in the top-left of the bill
Bank name / Account / IFSC	Prints at the foot so customers can pay
UPI ID	If filled, a scan-to-pay QR is added to the bill
Default terms	One condition per line; they print numbered at the bottom

Click **Save** (top right). You can also upload your shop logo with **Upload** — it appears on PDFs.

7. Choosing the saree (textile) bill format

Scroll down in Settings to **Preferences**.

The screenshot shows the Shailee-GRMS interface. The left sidebar contains a menu with categories: MASTERS (Items, Clients & Vendors), OPERATIONS (Point of Sale, Inventory, Purchases, Sales, Payments), INSIGHTS (Reports), and ADMINISTRATION (Users, Activity Log, License, Settings, Help & Support). The 'Settings' option is highlighted. The main content area is titled 'Settings' with a subtitle 'Your company identity appears on every invoice and document.' and a 'Save' button. The 'Company profile' section includes a 'Company logo' upload area, and fields for 'Legal name *' (KRISHNA GANGA CREATION), 'Trade name' (KRISHNA GANGA CREATION), 'GSTIN' (24ACNPB0084A1ZB), 'PAN' (ACNPB0084A), 'Address line 1' (SHOP-107, DADU TEXTILE MARKET), 'Address line 2' (RING ROAD, UMARWADA), 'City' (SURAT), and 'State' (Gujarat). A 'Trial - 14d left' banner is at the bottom left.

Preferences — switch Invoice template to "Textile GST" for saree billing

Set **Invoice template** to **Textile GST (PCS / CUT / MTS)**. This is the format with the PCS / CUT / MTS / RATE columns and the transport block — the layout saree traders use. Leaving it on *Standard GST* gives a plain GST invoice instead.

Both are kept

Switching does not delete anything. You can move between the two formats at any time and reprint an old bill in either.

8. Setting your shop defaults

Choosing the textile template reveals five extra boxes. Filling them once saves typing on every single bill.

Setting	Example	What it does
Invocation line	Shree Ganeshaya Namah	Prints centred above your firm name
Default transport	ANCHAL LOGISTICS	Pre-filled on the POS and on new bills
Default scheme label	DISCOUNT	The word printed before the discount line. Some shops print SCHEME.
Default scheme %	2	Your usual trade discount, applied before GST
Default cut	6.30	Metres in one saree. New designs start with this filled in.

Each box saves as soon as you click away from it.

Prevent negative stock

Tick this to stop staff billing more pieces than you actually have. The invoice is refused with a message like "*Not enough stock for PASHMINA SILK 16075. Available: 19, required: 25.*" Recommended once your opening stock is entered correctly.

9. Staff accounts and what each role can do

Open **Users** under Administration.

Users — one account per person who touches the system

New user

The user will be asked to change this password at first login.

Full name *

Username *

Email

Role

Password *

☒ Active

Roles control what each user can see and do. Operators do data entry; Managers add reports & approvals; Admins run everything; Super Admins also manage users & licensing.

Cancel

Save

Creating a staff account. Choose the role carefully.

Role	Can do	Cannot do
Super Admin	Everything including licence management	—
Admin (you)	All business work, staff, settings, backups	Vendor-only licence controls
Manager	Billing, purchases, payments, all reports, approvals	Create users, change settings, take backups
Operator (counter staff)	Bill at the POS, add customers, record payments, see stock	Edit or delete a saved bill , adjust stock, manage items or barcodes, see profit reports, users, settings, licence, activity log, backups

Why an Operator cannot change a saved bill

Raising a bill and *amending* one already raised are separate privileges. Counter staff can bill all day, but cannot go back and rewrite yesterday's invoice, delete a document, or edit a goods-received note to change your stock. Those need a Manager or Admin. It is the single most useful control in the system for a shop with staff.

Give counter staff an Operator account

They get the POS and nothing that could damage your data. The restriction is enforced inside the program, not just hidden on screen — an Operator cannot reach admin functions even if they try.

First login for staff

You set a temporary password. The first time they sign in, the app forces them to choose their own — so you never know their password.

10. Adding saree designs

Items is your design master — one row per quality/design, not per piece. Six pieces of the same design is one row with 6 in stock.

DOLA-MINA-SILK-8050	DOLA MINA SILK 8050	—	5407	₹680.00	₹850.00	GST 5%	4		

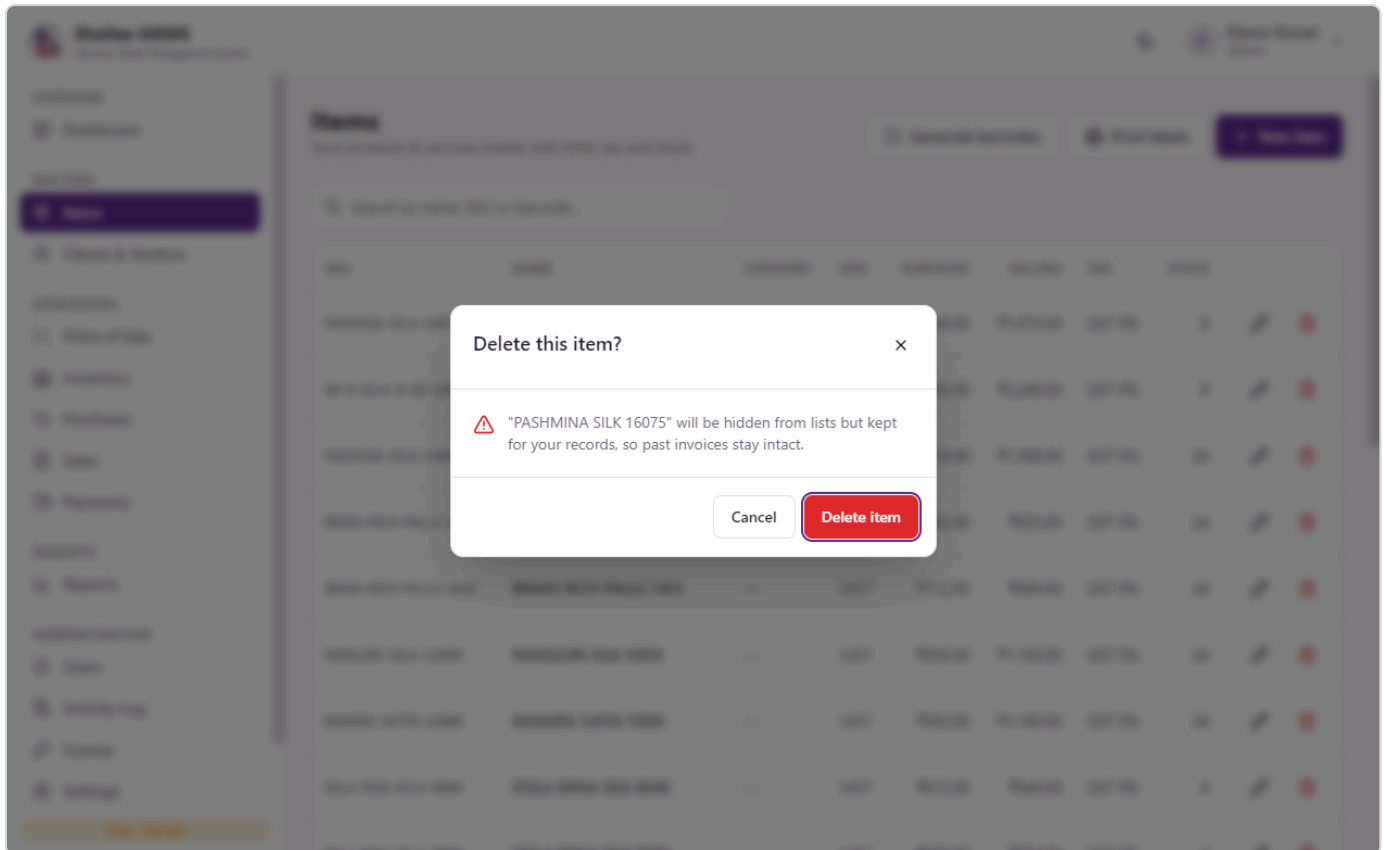

The Items list — every design with HSN, prices, tax and stock

Click **New item**:

Adding a design. Cut is pre-filled from your shop default.

Field	For a saree
SKU (required)	Your own short code, e.g. PASHMINA-16075 . Must be unique — a repeat is refused.
Item name (required)	Exactly as it should print on the bill, e.g. PASHMINA SILK 16075
HSN / SAC	5407 for woven man-made fabric sarees. Ask your CA if unsure.
Barcode	Leave blank — section 11 generates them in bulk
Cut	Metres in one piece, normally 6.30
Packing	Only for box goods, e.g. BOX . Prints instead of the CUT column.
Category	Your own grouping — Saree , Salwar Suit , Lehenga , Dupatta . Type a new one and it is created; type an existing one and it is reused. This is how you separate product types, not the barcode number.
GST tax rate	GST 5% for most sarees
Purchase price	What the mill charges you per piece (used for profit reports)
Selling price	Your rate per piece — this is the RATE on the bill
Reorder level	Warn me below this many pieces
Opening stock	Pieces you already have today, with their total value

Use the **pencil** to edit a design and the **bin** to remove one. Deleting only hides it — past bills keep working.

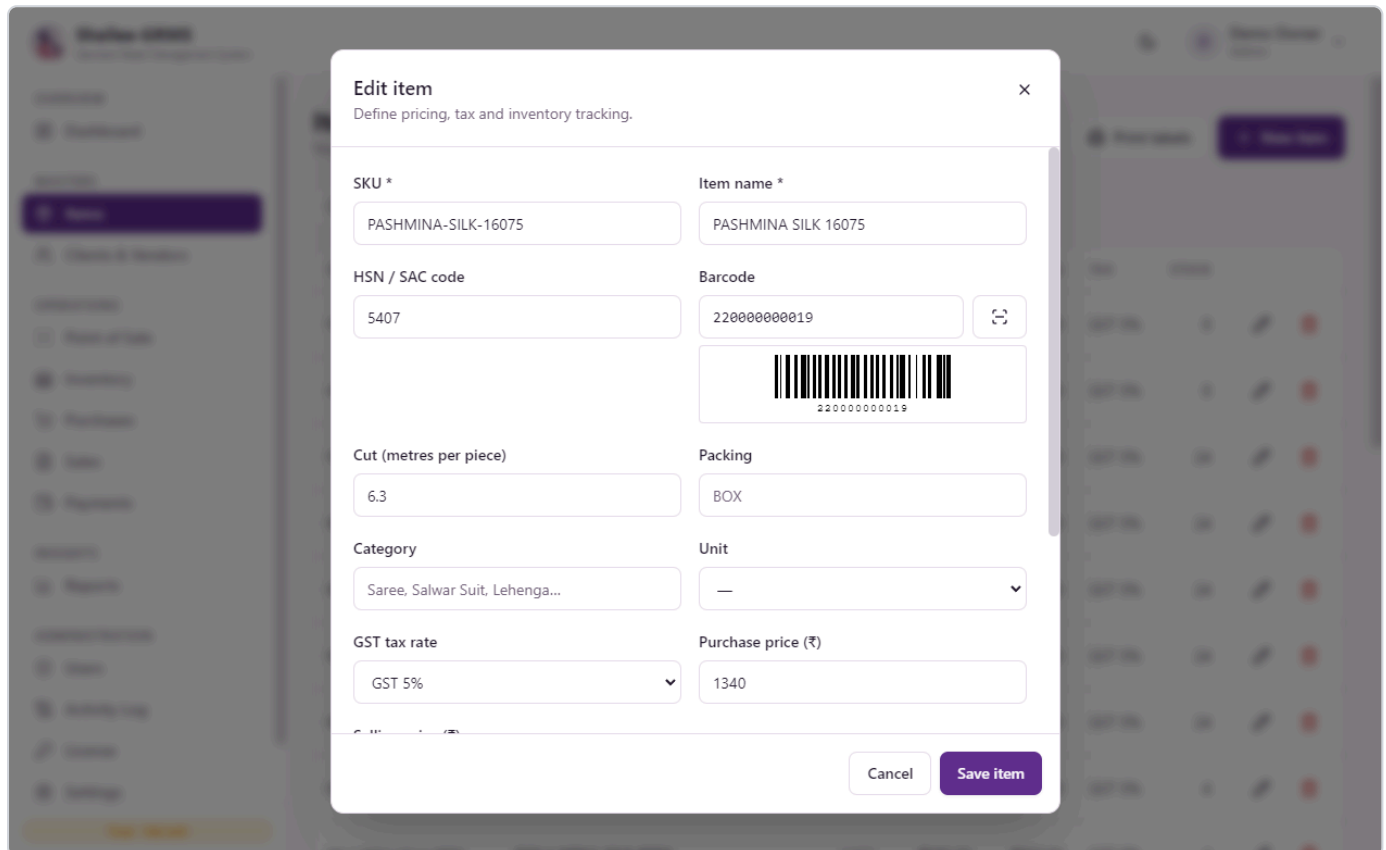

Deleting always asks first, and explains what will happen

11. Generating barcodes

Every design needs a barcode before it can be scanned. You do **not** type these — the software issues them.

- 1 On the Items page, click **Generate barcodes** (top right).
- 2 Every design that has no barcode gets one. A message confirms how many.
- 3 Run it again after adding new designs — existing codes are never changed.

Open any design to see its barcode and a live preview of the printed label

What the number means

Codes look like 220000000019 . They start with

22

, the range reserved worldwide for a shop's own internal use, so they can never clash with a manufacturer's barcode. The middle digits are simply the next number in line. The last digit is a check digit — if a scanner misreads, the software rejects it instead of billing the wrong saree.

Do sarees and salwar suits get different barcode numbers?

No — and deliberately so. Barcodes are issued in plain sequence, in the order designs are added. A saree might get 220000000019 and the salwar suit added next gets 220000000026 . The number itself carries no meaning about the product.

This is how shop barcodes are meant to work. The barcode is only a **label pointing at a record** — the record holds the name, category, HSN, rate and cut. Scanning fetches all of it instantly.

To separate product types, use	Why that, and not the barcode
Category — Saree, Salwar Suit, Lehenga	Groups and filters your list, and can be changed any time without reprinting a single label
HSN code — 5407 saree, 6204 readymade suit	This is what actually decides your GST treatment and appears in the HSN Summary report
SKU — SAREE-16075 , SALWAR-001	Your own readable code, printed on the label under the bars

Why numbers should not encode the product type

If 2201... meant "saree" and 2202... meant "salwar suit", then the day you re-classify an item the barcode would be telling a lie — and you would have to reprint and re-stick every label to correct it. Keeping the number meaningless means a design can change category, price, HSN or rate freely and the sticker on the piece stays valid for life.

You can still use your own numbers

If you already have a barcode scheme, type it into the

Barcode

box on the item instead of generating one. The app accepts any Code 128 value — digits, letters, or both — and shows a live preview of the printed label.

One barcode per design

All six pieces of PASHMINA SILK 16075 share one barcode. At the counter you scan it six times (or scan once and type 6). This is far faster than serial- numbering every piece.

12. Printing and sticking barcode labels

Click **Print labels** on the Items page. You choose *which* designs to print, *how many* labels each one needs, and *what size* the label stock is — nothing is fixed.

Print barcode labels

Pick the items, set how many labels each one needs, then set your label sheet size in millimetres.

Search item, SKU or barcode

8 labels from 2 items · 5 across × 13 down = 65 per sheet · 1 sheet

Cancel Print labels

The label designer: pick items on the left, set the sheet in millimetres on the right

Step 1 — pick the designs and the quantities

- 1 Search by design name, SKU or barcode.
- 2 Tick the designs you want. Only barcoded items are listed.
- 3 Type how many labels each one needs, or use the – and + buttons. Every design can have a different number — 3 of one, 40 of another.
- 4 **Add all** ticks everything currently listed.
- 5 **Match stock** sets each design to one label per piece you hold — the usual job after a delivery.

Step 2 — set your label size in millimetres

Pick your stock from **Label stock**, or choose **Custom size...** and type the measurements from the label packet:

Box	What to measure
Sheet width / height	The whole sheet, or for a thermal roll, one label.
Label width / height	One sticker.
Margins	The blank border before the first sticker starts.
Gaps	The space between stickers, if any. Often 0.
Skip used labels	Feeding a part-used sheet back in? Leave that many blank.

The software works out how many fit — it shows “**5 across × 13 down = 65 per sheet**” at the bottom, and how many sheets the job needs. The preview beside it is the real printout, not a drawing.

Ready-made sizes included: A4 sheets of 65, 48, 24 and 12 labels, and thermal rolls at 50 × 25 mm and 38 × 25 mm, one or two across.

Step 3 — choose what goes on the label

Tick **Item name**, **SKU** and **Price** as you like. On a very small label, switching the name off leaves more room for the bars.

Step 4 — print

- 1 Choose your **printer** from the box at the bottom — your usual one is already selected. It is remembered separately for labels, so your barcode printer stays chosen even when reports go to a different printer.
- 2 Click **Print** and the stickers come straight out. **Save PDF** is still there if you want a file instead.
- 3 Stick one label on each piece, or on the fold of each pile.

Your sheet measurements are remembered, so the next print run needs only the items and quantities.

If the software warns that the bars are too thin

Below about 0.19 mm per bar, handheld scanners start misreading. The software checks this as you type and warns you before you waste a sheet. Use a wider label, or switch the item name off to give the bars more room.

Printing tips

Print at

100% / Actual size

— never “Fit to page”, which shrinks the bars until scanners cannot read them. Use a laser printer if you have one; inkjet bars can smudge and fail to scan. For a thermal barcode printer, set the paper size in the printer driver to the same millimetres you typed here.

13. Adding customers and suppliers

Open **Clients & Vendors**. The two tabs are separate lists — **Clients** are who you sell to, **Vendors** are who you buy from.

The screenshot displays the Shailee-GRMS interface. The sidebar on the left contains the following menu items: OVERVIEW (Dashboard), MASTERS (Items, **Clients & Vendors**), OPERATIONS (Point of Sale, Inventory, Purchases, Sales, Payments), INSIGHTS (Reports), and ADMINISTRATION (Users, Activity Log, License, Settings). A yellow banner at the bottom of the sidebar indicates 'Trial - 14d left'. The main content area is titled 'Clients & Vendors' with the subtitle 'Schools, colleges and other customers, plus your suppliers.' and a '+ New customer' button. Below the title are tabs for 'Clients' and 'Vendors', and a search bar labeled 'Search name, phone, GSTIN...'. A table lists the following client:

NAME	GSTIN	CONTACT	LOCATION	BALANCE	
RAJESHWARI SHREE	10AZ3PK4799G1Z6	—	MUZAFFARPUR, Bihar	₹0.00	

The client list, with outstanding balance per party

Adding a client. State code decides the GST type on their bills.

Field	Why it matters
Type	Client, Vendor, or Both. Set automatically from the tab you are on.
Name (required)	Prints as the Buyer on the bill
GSTIN	Prints on the bill and feeds your GSTR-1. Format is validated.
Billing address, City, State	Prints under the buyer name
State code (GST)	The most important field. Compared with your state code to choose IGST or CGST+SGST. Bihar = 10.
Credit limit	Warns you when a new bill would push them over
Credit days	Sets the due date on their invoices automatically
Opening balance	What they already owe you today

Purchases

Purchase orders, goods received (stock in) and returns.

Goods Received (GRN)

Purchase Orders

Returns (Debit Note)

dd-mm-yyyy

dd-mm-yyyy

+ New

NUMBER	DATE	PARTY	TOTAL	PAYMENT	
GRN/2026-27/0001	29 Jul 2026	MILL SUPPLIER	₹3,14,345.00	unpaid	

Purchases → Goods Received (GRN)

Recording goods in. Pick the vendor, then add a line per design.

- 1 **Purchases** → **Goods Received (GRN)** tab → **New**.
- 2 Choose the **Vendor** and enter their bill number under **Supplier invoice no**.
- 3 Put the consignment's **Batch / Lot no** at the top. Every line takes it automatically, so it is typed once, not per design.
- 4 Add the designs, either way:
 - **Scan barcode** — scan or type a code and press Enter. Scanning the same design again adds one more to its quantity.
 - **Search** on the line — type part of the design name or SKU and pick it. There is no long dropdown to scroll.
- 5 Type **Qty** (pieces) and the **Rate** the vendor charged.
- 6 Type your **Margin%**. The **MRP** box fills in by itself — rate 4560 at 45% gives 6612 — and you can type over it to round it to 6615 or 6620. Whatever is left there is saved as that design's selling price and is what prints on the barcode sticker.
- 7 Tick **Inter-state supply** if the mill is in another state.
- 8 **Save**. Stock goes up immediately.

Buying the same design again

Pick it and the screen reopens at last time's rate, margin and MRP. Change only what has actually changed.

Vendor discounts

Vendors give discounts in different ways, so all of them are here:

Where	What it does
Disc on a line	Discount on that one design.
Discount on the whole bill	Percentage or a flat rupee figure, or both. GST is charged on what is left after it , which is how the vendor's own bill works.
Cash discount under payment	Allowed for settling now — see below.

Paying the vendor from the same screen

- 1 Fill **Amount paid** and pick the **Mode** — Cash, UPI, Bank transfer, Cheque or Card.
- 2 Put the UTR or cheque number in **Reference**.
- 3 If the vendor allowed a **cash discount** for paying now, type it as a percentage or an amount. The bill is settled for what you paid *plus* the discount, so it shows as cleared while your books still record only the money that actually left.
- 4 **Save** — the purchase and the payment are recorded together.

Printing the stickers straight away

After saving a GRN the software asks whether to print barcode labels for what just arrived. Say yes and the label screen opens with every design already ticked and **one sticker per piece received**. Change any quantity if you want, choose the printer, and print. See section 12 for the label sizes.

Check it worked

Open

Inventory

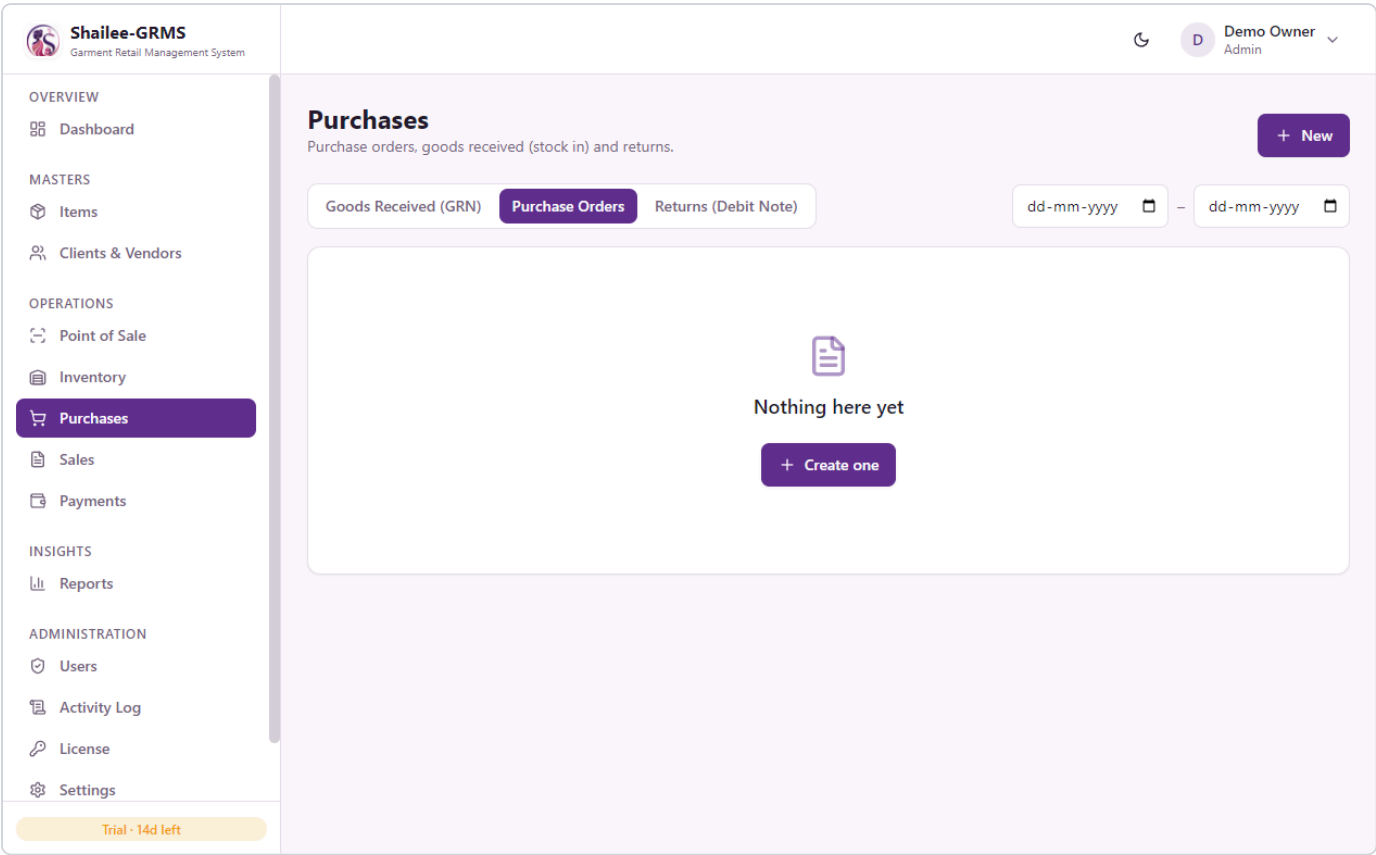

— the pieces should now appear against each design.

Only the Admin can change a saved purchase

Once a goods-received note is saved it has already moved stock and money. Managers and counter staff can raise as many as they like but cannot go back and rewrite or delete one. The same applies to sales bills.

15. Purchase orders

A **Purchase Order** is what you send the mill *before* goods arrive.

The Purchase Orders tab

A PO does not change stock

That is deliberate — you have ordered, not received. When the bundle actually turns up, use the **Convert** action on the PO row to turn it into a GRN in one click, and stock moves then.

16. Checking your inventory

 **Shailee-GRMS**
Garment Retail Management System

Inventory → Stock summary: pieces on hand and their value

Stock summary shows every design, pieces in hand, and stock value. Low-stock designs are highlighted so you know what to reorder.

Correcting a count

If a physical count does not match — damage, a sample given away, a miscount — use **Adjust stock**.

Stock adjustment: record why the count changed

Pick a **Reason** (damage, expiry, count correction, other), choose the design, and enter the change: **-2** to remove two pieces, **5** to add five. Always leave a note — the adjustment is permanent in the record.

17. The POS screen

Point of Sale is the counter screen. It is designed so a bill can be made without touching the mouse.

18. Scanning sarees with a barcode machine

No driver, no setup

A USB barcode scanner behaves exactly like a keyboard: it types the number then sends Enter (or Tab — both are accepted). Plug it into any USB port and it works. There is nothing to install, and nothing to set up inside the app.

- 1 Choose the **Customer** at the top right.
- 2 Click once inside the **Scan barcode** box.
- 3 Scan a saree's label. It appears in the table with 1 piece.
- 4 Scan the same label again for a second piece — the count becomes 2.
- 5 Carry on for every saree the customer is taking.

An unknown barcode is refused clearly — nothing is added to the bill

Usually one of: the design was never given a barcode (run **Generate barcodes**), the label is from another shop's system, or the design was deleted. You can also type the **SKU** into the same box and press Enter — useful when a label is torn.

Keep the cursor in the scan box

A scanner types wherever the cursor happens to be. If you click into another field the next scan lands there. The box re-focuses itself, but check it if a scan seems to do nothing.

19. Understanding PCS, CUT and MTS

These three columns confuse people at first. They are simple:

Column	Meaning	Where it comes from
PCS	Number of sarees	How many times you scanned
CUT	Metres in one saree	The design's Cut, normally 6.30
MTS	Total metres	Worked out: $PCS \times CUT$
RATE	Price of one saree	The design's selling price
AMOUNT	Line total	Worked out: PCS $\times$ RATE

Money is per piece, never per metre

6 pieces at ₹1,398 is

$$6 \times 1,398 = ₹8,388$$

. The 37.80 metres is printed for the transporter and for your own records — it is never multiplied into the price. This matches how your existing bills are calculated.

20. Discount / scheme before GST

Trade discount is taken off the whole bill **before** GST is worked out. Order of operations:

- 1 Add up every line → **SUB TOTAL**
- 2 Take off the scheme % → **Taxable Value**
- 3 Charge GST on the taxable value
- 4 Round to the nearest rupee → **Invoice Value**

A real example from a ₹52,126 bill at 2%:

SUB TOTAL	₹52,126.00
DISCOUNT @ 2%	– ₹1,042.52
Taxable Value	₹51,083.48
IGST @ 5%	₹2,554.17
Round off	₹0.35
Invoice Value	₹53,638.00

Change **Scheme %** to 0 for a bill with no discount. Change the **Scheme label** if you print the word SCHEME rather than DISCOUNT.

21. IGST vs CGST + SGST

You never choose this — the software compares your state code with the customer's:

Situation	Tax charged	Shown on the POS as
Surat (24) → Bihar (10) — different states	IGST 5% as one line	Inter-state — IGST (24 → 10)
Surat (24) → Surat (24) — same state	CGST 2.5% + SGST 2.5%	Intra-state — CGST + SGST

If the customer has no state code

The POS shows an orange warning instead of guessing. Charging the wrong type of GST is a filing problem, so fix the customer's record before billing: Clients & Vendors → edit → State code.

22. Saving and printing the tax invoice

- 1 Check the customer and the totals panel.
- 2 Click **Save & print bill**.
- 3 The invoice is saved and given its number, e.g. `INV/2026-27/0001`.
- 4 A save box appears — choose where to keep the PDF.
- 5 The PDF opens; press **Ctrl+P** to print it.
- 6 The cart clears, ready for the next customer.

Numbering

Numbers run in an unbroken series per financial year — `INV/2026-27/0001`, `0002` and so on. Gapless numbering is a GST requirement and is handled for you.

Everything the bill touched is updated in the same instant: stock reduces, the customer's outstanding rises, and the sale enters your GST reports.

23. The printed bill explained

This is the layout you get with the Textile GST template:

!! Shree Ganeshaya Namah !!						
KRISHNA GANGA CREATION

24. Proforma, challan, order and credit note

Sales holds five kinds of document. They all fill in the same way; only their meaning differs.

Sales → Invoices, with the actions available on each row

Tab	Use it for	Moves stock?
Invoices	The real GST bill	Yes — stock out
Proforma	A quotation before the customer commits	No
Delivery Challan	Goods sent without a bill yet (approval, job work)	No
Orders	A confirmed order to supply later	No
Returns (Credit Note)	Goods coming back from a customer	Yes — stock back in

Cancel Save

Allocating a receipt against open bills, oldest first

The bills move from **unpaid** to **partial** or **paid**, and the customer's outstanding drops straight away.

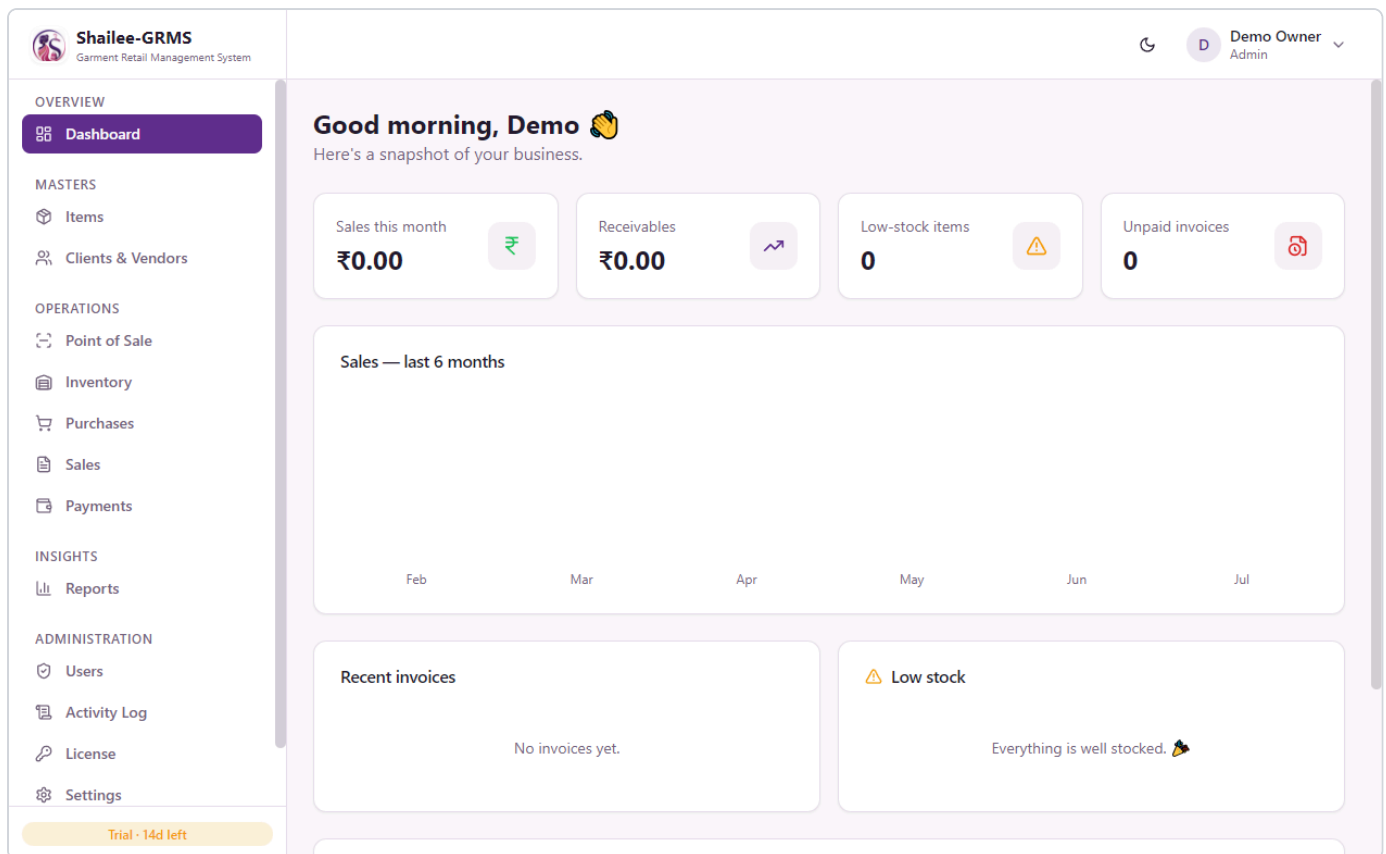

Money kept "on account"

You may deliberately clear the boxes and save money without applying it to any bill — an advance, or a payment you will match up later. The software will ask you to confirm first, because until it is applied those bills keep showing their full outstanding amount in the ledger and in

Receivables (Aging)

, and the customer will still appear on your reminder list. To apply it later, record it against the bill from this same screen.

26. Dashboard

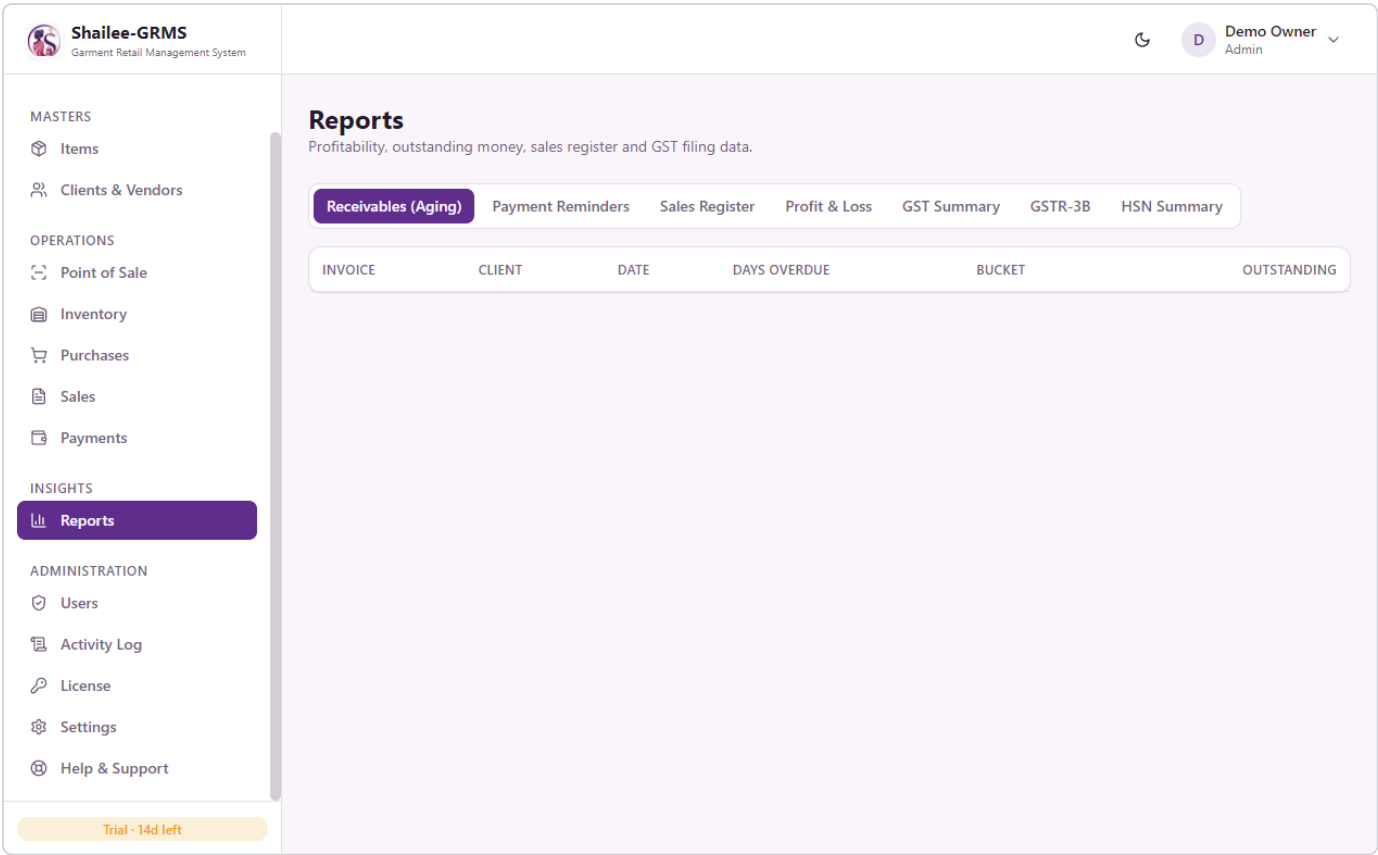

The Dashboard — the first thing you see each morning

- **Sales this month** — billed value so far
- **Receivables** — total your customers owe you
- **Low-stock items** — designs at or below their reorder level
- **Unpaid invoices** — how many bills are still open
- A six-month sales chart, recent invoices, and a low-stock list

27. All seven reports

Reports has seven tabs. Each can be exported for your CA.

Receivables (Aging) — who owes you, and for how long

Report	Answers
Receivables (Aging)	Who owes money, bucketed by 0–30 / 31–60 / 61–90 / 90+ days
Payment Reminders	Which customers to chase today
Sales Register	Every bill in a date range — the classic sales book
Profit & Loss	Sales minus cost of goods sold, using weighted-average cost
GST Summary	Tax collected, split by rate, for your return
GSTR-3B	Figures laid out as the 3B return expects
HSN Summary	Sales grouped by HSN code, required in GSTR-1

Export CSV

The Activity Log — a permanent, unchangeable record of every action

- **Search** by action, user or record
- **Area** — narrow to sales, purchases, items, auth and so on
- **User** — see everything one person did
- **From / To** — restrict to a date range
- Click any row to see the technical detail behind it
- **Export CSV** for your CA or an auditor

It cannot be edited

Entries are only ever added — there is no way to change or delete one from anywhere in the program. That is what makes it usable as evidence.

What it answers

"Who deleted that invoice?" · "Who changed this rate?" · "Did the counter staff log in on Sunday?" · "When did this customer's GSTIN change?"

Shailee-GRMS — Complete User Guide

29. Backups — protecting your data

Your whole business is one file on one computer

A failed hard disk with no backup means losing every bill, customer and stock figure. This section is the most important in the guide.

Backup now

Settings → **Create backup...** → choose a pen drive or a cloud-synced folder. Take one at the end of every trading day.

Automatic daily backups

Enable under "Automatic daily backups", then pick a folder — ideally a Google Drive or OneDrive folder so a copy leaves the building. The app then backs up by itself once a day.

Restoring

Restore from backup..., pick the file, and confirm. This **overwrites everything** currently in the app and restarts it. You will be asked to confirm in plain words first.

Installing a new version of Shailee-GRMS

When Shailee send you an updated installer, just run it on the same computer. It replaces the old version in place — **your data is not touched**. Every bill, customer, item, stock figure and setting stays exactly as it was, because your data lives in a separate folder that the installer never goes near. You do not need to uninstall first, and you do not need to restore a backup.

Take a backup first anyway

Updating is safe, but a backup before any install costs you thirty seconds and covers you against a power cut halfway through.

One-time step after this update

If your copy was already activated with a licence key, the first launch after updating may ask you to **enter that same key once more**

. This is a one-off: the update improved how licences are checked, and the older record cannot be re-checked the new way. Your Machine ID has not changed, so the key you already have will work. The software keeps running normally for 30 days while you do it, and the sidebar shows an orange

Re-enter key

badge as a reminder. Lost the key? Ask Shailee — they can re-send it.

Moving to a new computer

- 1 Create a backup on the old computer.
- 2 Install Shailee-GRMS on the new one.
- 3 Create the owner account, then use **Restore from backup**.
- 4 On the old computer, open **License** → **Deactivate this device**.

- 5 Send Shailee the confirmation code; they issue a key for the new machine.

30. Licence — trial, activation and transfer

The app runs free for **14 days** from the moment you first open it. Everything works during the trial — nothing is crippled or hidden. The sidebar shows an orange **Trial · N d left** badge so you always know where you stand.

What happens as the trial runs out

Stage	What you see	Can you still work?
Days 1–14	Orange Trial badge counting down	Yes — everything
Trial ends	Renew soon warning	Yes — 3-day grace period
After the grace period	Activation screen on launch	Billing locks until you activate
Activated	Green Licensed badge	Yes — everything

Your data is never touched

If the trial lapses, nothing is deleted — not one invoice, customer or stock figure. The moment a valid key is entered everything is exactly as you left it. You are never at risk of losing work by being slow to pay.

Activating — the whole process

Activation is **fully offline**. Your computer never contacts a licence server, so it works in a shop with no internet at all. It is a two-message exchange over WhatsApp, email or phone.

The screenshot shows the Shailee-GRMS application interface. The sidebar on the left contains navigation links for Masters (Items, Clients & Vendors), Operations (Point of Sale, Inventory, Purchases, Sales, Payments), Insights (Reports), and Administration (Users, Activity Log, License, Settings, Help & Support). The 'License' option is highlighted. The main content area is titled 'License' and includes a subtitle 'Activate, view, or move your license to another computer.' Below this, there are two main sections: 'Status' and 'Activate'. The 'Status' section shows 'Free trial — 14 day(s) remaining.' and 'Licensed to' (blank). The 'Machine ID' is displayed as 'F23DA50ECF28630B0918A608397C4C5F'. The 'Activate' section has a 'License key' input field with the value 'LL1.xxxxxx.xxxxx' and an 'Activate' button. Below the button, there is a message: 'To activate a full license, share your **Machine ID** with us. We'll send a key bound to this computer.' followed by contact information: 'robin@skytechdevelopments.com' and '+91 76318 69625'. A yellow badge at the bottom left of the sidebar indicates 'Trial · 14d left'.

The License screen. Your Machine ID is the long code in the middle.

- 1 Open **License** under Administration (or **Help & Support**).

- 2 Find **Machine ID** — 32 letters and digits, e.g. `A1B2C3D4E5F60718293A4B5C6D7E8F90`.
- 3 Press the **copy** button beside it and send it to Shailee with your payment. **Use the copy button** — typing it by hand almost always introduces a mistake.
- 4 Shailee send back a licence key starting `LL1.` It is long — that is normal.
- 5 Paste the whole key into the activation box on the **License** screen.
- 6 Click **Activate**.
- 7 The badge turns green and your firm's name and expiry date appear.

Why we need the Machine ID

Your key is mathematically locked to that one computer. It cannot be copied to another PC or shared, which is what lets us sell a per-computer licence without any online check. Nobody needs remote access to your machine to activate it.

Is the Machine ID private?

No — it is safe to send. It is a scrambled one-way code made from your computer's name and processor type. It holds no personal or business information and cannot be turned back into anything about you.

If activation is refused

Message	What to do
"This license key was issued for a different computer"	The Machine ID sent did not match this PC — usually a typo, or it was read from a different computer. Copy it again with the button and ask for a fresh key.
"This license key has already expired"	The validity period ended. Ask Shailee for a renewal key.
"Invalid license key"	The key was cut short or altered when pasting. Copy the entire string, including the <code>LL1.</code> at the front, with no spaces or line breaks.

Renewing

If your licence has an expiry date, Shailee send a new key before it runs out. Paste it in exactly as the first time — same screen, same button. Nothing is reinstalled and no data moves.

Moving to a new computer

Because a key is tied to one PC, changing computers is a short handover. **Do this before disposing of the old machine.**

- 1 On the **old** PC: **Settings** → **Create backup...** and save to a pen drive.
- 2 Still on the old PC: **License** → **Deactivate this device**.
- 3 The app shows a **confirmation code**. Send it to Shailee — it proves the old computer released the licence.
- 4 Install Shailee-GRMS on the **new** PC and create your owner account.
- 5 **Settings** → **Restore from backup...** and pick the file from the pen drive.

6 Send Shailee the **new** Machine ID; they issue a replacement key.

7 Activate on the new PC.

If the old computer has died

You cannot produce a confirmation code from a dead machine. Call Shailee and explain — they can issue a key for the new computer. Your data comes back from your most recent backup, which is exactly why section 29 matters.

Help & Support — version, Machine ID and shortcuts to your data

- **Version** and **Machine ID** — quote both when contacting support
- **Open data & backups folder** — jumps straight to your database file
- **Open logs folder** — technical logs support may ask for
- Email, phone and WhatsApp for Shailee

32. Barcode scanner setup & tips

Buying one

Any **USB "keyboard wedge"** scanner works — that is nearly all of them, from about ₹1,200. Look for **1D / Code 128** support (the labels this app prints). You do not need a 2D/QR scanner, though one will also work.

Setting it up

- 1 Plug it into a USB port. Windows sets it up by itself.
- 2 Open Notepad and scan a label — the digits should appear, then a new line.
- 3 If they do, the scanner is ready. There is nothing to configure in the app.

Enter or Tab — both work

Most scanners send

Enter

after the digits; some are factory-set to send

Tab

. Shailee-GRMS accepts either, so there is normally nothing to configure. If your scanner sends *neither* (the digits appear but nothing happens), scan the "Add Enter / CR suffix" configuration barcode printed in its manual.

Scan as fast as you like

Pieces are counted even when labels are scanned back-to-back with no pause, and two designs scanned alternately still group into one line each.

At the counter

- Keep the cursor in the **Scan barcode** box.
- Hold the scanner 10–20 cm from the label, square on.
- Torn or smudged label? Type the **SKU** and press Enter instead.
- Scanning fast is fine — the app queues scans and will not drop one.

33. The account menu & changing your password

Your name sits in the **top-right corner** of every screen. Click it for:

Change password	Set a new password for yourself. Asks for the current one first.
New recovery code	Issues a fresh code and cancels the old one immediately . Write the new one down before closing the box.
Sign out	Locks the app and returns to the sign-in screen

Beside it is the **moon / sun** button, which switches between light and dark appearance. Dark is easier on the eyes in a dim shop; the choice is remembered for next time.

Sign out at closing time

Especially if staff share a counter computer. It takes two seconds and keeps the activity log meaningful — every action is recorded against whoever was signed in.

34. Your daily / weekly / monthly routine

Once set up, this is all the software asks of you.

Every day

- Sign in; glance at the **Dashboard** for receivables and low stock.
- Bill customers at the **POS** as they buy.
- Record any **GRN** for stock that arrived.
- Record **receipts** as money comes in.
- **At closing: Settings → Create backup** to a pen drive.

Every week

- **Reports → Payment Reminders** — chase overdue customers.
- **Inventory** — check low stock and reorder.
- Spot-check a few designs' physical count against the system.

Every month

- **Reports → GST Summary** and **HSN Summary** — export for your CA.
- **Reports → Profit & Loss** — check your real margin.
- **Reports → Receivables (Aging)** — review anything past 60 days.
- Take a backup you keep **off the premises**.

The one habit that matters

If you do nothing else from this list, take the daily backup. Everything else can be reconstructed; a lost database cannot.

35. Updating and uninstalling

Installing an update

- 1 Take a backup first (**Settings** → **Create backup**).
- 2 Close Shailee-GRMS.
- 3 Run the new `Shailee-GRMS-Setup-x.x.x.exe`.
- 4 Install over the top — do **not** uninstall first.
- 5 Open the app. Your data, licence and settings are all still there.

Updates never touch your data

The installer only replaces program files. Your database sits in a separate folder and is upgraded automatically if the new version needs it.

Uninstalling

Windows **Settings** → **Apps** → **Installed apps** → Shailee-GRMS → **Uninstall**.

Uninstalling deliberately leaves your data behind

Your database stays in `C:\Users\<you>\AppData\Roaming\shailee-grms\` so that reinstalling brings everything back. If you are selling or scrapping the computer and want the business data gone, take a backup first, then delete that folder by hand.

Deactivate before wiping a computer

Go to

License → **Deactivate this device**

first (section 30). Otherwise the licence stays tied to a machine you no longer have.

36. Troubleshooting

Problem	Fix
"Windows protected your PC" when installing	Click More info → Run anyway . Appears because the installer is not code-signed yet.
Scan does nothing	Click into the Scan barcode box first. Test the scanner in Notepad.
"No item matches ..."	That design has no barcode. Items → Generate barcodes .
Bill shows CGST+SGST but should be IGST	The customer's State code is missing or matches yours. Fix it in Clients & Vendors.
"Not enough stock for ..."	Working as intended. Record the GRN for goods received, or turn off <i>Prevent negative stock</i> in Settings.
Cannot edit an invoice	A payment is recorded against it. Delete the receipt first, or raise a credit note.
Barcode labels will not scan	Reprint at 100% / Actual size , not "Fit to page".
Forgot the password	Forgot password? on the sign-in screen, then your recovery code.
Staff member cannot see Reports or Settings	They are an Operator. Change the role in Users if they should have more.
Wrong amounts on a saved bill	Sales → Edit the invoice (if unpaid), correct it, and save. Numbering does not change.
"License key was issued for a different computer"	The Machine ID did not match. Copy it again with the button and ask for a fresh key (section 30).
Trial expired and billing is locked	Send Shailee your Machine ID and activate. No data is lost — everything returns the moment a key is entered.
App will not start after moving the data file	Put the file back in <code>AppDataRoaming\shailee-grms</code> . Use Backup/Restore to move data, never copy the file by hand.
Two people need to bill at once	Not supported — one computer, one copy. Running two copies on a shared file will corrupt your records.

37. Glossary

CUT	Metres in one saree, normally 6.30
PCS	Number of pieces (sarees)
MTS	Total metres = PCS × CUT. Printed for reference only.
RATE	Price of one piece
SKU	Your own code for a design
HSN	Government product code. 5407 for most woven sarees.
GRN	Goods Received Note — records stock coming in
PO	Purchase Order — what you ask the mill to send
Proforma	A quotation; not a tax invoice
Challan	Goods sent without billing yet
Credit Note	Goods returned by a customer
IGST	GST on sales to another state, charged as one figure
CGST + SGST	GST within your own state, split in half
Taxable Value	Bill value after discount, before GST
Scheme	Trade discount taken off before GST
E-Way Bill	Transport permit for consignments above the state threshold
Machine ID	This computer's fingerprint; your licence is tied to it
Reorder level	Stock level at which the app warns you
